Alliance Technologies Partners with Palisade Systems to Offer Comprehensive Data Loss Prevention Solutions

DES MOINES, Iowa. – (May 26, 2010) - Alliance Technologies, a leading provider of full-service information technology solutions has partnered with Palisade Systems, a leader in Data Loss Prevention (DLP) solutions for the small- and medium-sized enterprise. By partnering with Palisade Systems, Alliance Technologies is able to increase their offered security options by providing both on-premise and Managed DLP solutions.

Alliance Technologies has also joined the Palisade VIP Reseller Program, and will be reselling Palisade's PacketSure DLP along with PacketSure Managed DLP. Alliance Technologies has integrated the PacketSure Managed DLP platform to provide a Data Loss Prevention solution engineered for large-scale shared network environments.

PacketSure Managed DLP was specifically designed for customers who use managed network security solutions and require data loss prevention. Many companies and offices work in industries that call for federal or state compliance, such as education, health care, and other companies that deal with private data. For example, the doctor's clinic or office has to keep patients' information private and secure, as outlined in HIPAA and HITECH. Instead of hosting all its own data, a smaller office works with a managed service provider to provide email, hosting and more. With PacketSure Managed DLP, these same clinics and offices are able to stay HIPAA and HITECH compliant by choosing data loss prevention as an option for their managed services.

Focusing on the small- and medium-sized enterprises that are required to be compliant with various federal and state regulations, PacketSure Managed DLP brings a comprehensive solution to hosted security services.

"Alliance Technologies offering PacketSure Managed DLP brings its security and hosted services expertise to our PacketSure Managed DLP solution, and enables them to help their new and existing customers stay protected and compliant with federal regulations," said Christian Renaud, CEO and President of Palisade Systems.

Alliance Technologies provides comprehensive information technology solutions and expertise to its customers, providing a complete line of technology products and services.

"Alliance Technologies looks to bring the best security products to our customers by being a single point of network management with comprehensive managed services," said Tom Agnitsch, Director of Security Solutions at Alliance Technologies. "With PacketSure Managed DLP as a choice within our hosted networking and IT services, we are able to bring the best security solutions to our customers and help our customers continue to be secure with their data."

As part of the Palisade Systems reseller program, Alliance Technologies will be able to participate in the company's marketing initiatives, the PSI Registration and Secure Assessment Programs, Extended Terms Programs and other sales support initiatives.

About Palisade Systems

Palisade Systems, Inc., is an industry leader in the Data Loss Prevention (DLP) market. Palisade's patented DLP product, PacketSure, is the industry's only all-in-one appliance that can be installed and running in less than one hour. PacketSure helps organizations proactively secure sensitive and proprietary intellectual property from leaving data networks, defines and enforces access to internal network resources, and enforces compliance with federal privacy and industry security regulations such as HIPAA and GLBA. For more information, please visit <http://www.palisadesystems.com> or contact Palisade by telephone at 1.888.824.0720.

Palisade Systems, the Palisade Systems Logo and PacketSure are trademarks, registered trademarks, or service marks of Palisade Systems. All other trademarks are the property of their registered owners.
